

# SPECIAL PROJECTS

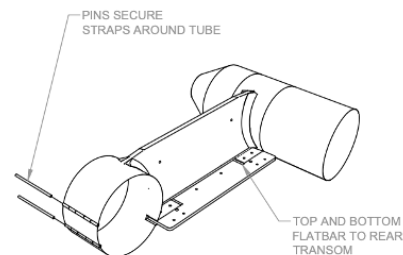

[inflatablesolutions.com](http://inflatablesolutions.com)

Wing is an inflatable solution provider. As such, we work on special projects for more unique requirements.

## UUV SLED:

The UUV Sled is designed as a transom less P series craft, which can be used to load objects from the aft of the sled and then tow them to a needed destination. A removable transom is available for use with a small outboard.

PERSPECTIVE VIEW**

## SKF-ICE:

The SKF-ICE is a craft capable of water/ice rescue. The craft can be powered with a small OB, or paddled. Often the craft is carried over the ice. With the open bow and stern, ice rescue is more easily completed by pulling a person into the craft and not over the gunnel.

## SKI-COLLAR::

Special Operations Maritime Forces recently converted their standard ski to the MRV, increasing the ski's capability tremendously. The Wing Ski-Collar keeps the ski from easily tipping in surf and provides additional flotation for rescue operations.
